

HODGSON RUSS/CO2LOGIC WEBCAST - OPPORTUNITIES ARISING FROM DECARBONIZING AND DEREGULATING THE ECONOMY IN THE U.S.

Webinars

October 31, 2017

October 31, 2017

Hodgson Russ is co-sponsoring a complimentary 1-hour webinar on Wednesday, November 8th, at 10 a.m. Electric grids across the developed world are aging and require significant upgrades and many governments and private entities are pursuing these upgrades using sustainable, low-carbon technologies. This is creating more opportunities for international companies. The webcast will highlight new policies and programs driving low carbon and resource efficiency projects in New York, California, Massachusetts and Colorado and outline specific examples of international firms that are working in the U.S. smart grid space. It will also outline what international companies can do to drive their export objectives in the U.S sustainability space, further CSR goals, and how to navigate legal issues when pursuing projects in the U.S., from complying with trade rules to working with impact investors.

The webinar will feature insights from Dan Spitzer and Arnaud Brohé, CEO of CO2logic Inc., and will be moderated by Michael Salat, Publisher of CleanTechIQ.
